

# RIPPLES™ GLOW PODS

A visually spectacular drinking experience

## 1. Design guidelines:

- Use thin lines and Shape Outline, do not use Shape Fill
- Use simple graphics that aren't too detailed
- Avoid using photographs or Gradient Fill
- Avoid using small text
- Leave enough space between each design element

## 2. Lighting options for best results:

- Use UV lighting (black light) throughout the whole area, **any other lighting should be dimmed**
- Small pocket UV flashlight can be provided with the cocktail
- Equip your staff on premise with a UV flashlight to create the impact at the table

## 3. UV flashlight specs:

- Use LED UV (black light) wavelength in the range of 390-360 nm
- Preferably use a flashlight with 50 LED or more (for pocket flashlight you may use less than 50 LED)
- Please refer to [this](#) link for a recommended UV flashlight

## Design guidelines:
